

# FALLING OBJECTS – INTEGRITY OF OVERHEAD STRUCTURES

**INSPECT AND MAINTAIN** overhead structures regularly for:

 **IMPACT**

 **CORROSION**

 **FATIGUE**

Any **collision damage** sustained must be **reported** and immediately **assessed** by competent structural engineers

Structures should be **routinely inspected** for signs of **corrosion** or **fatigue** by competent structural inspectors

**Potential for fatigue** in overhead structures, particularly within lifting equipment, must be recognised as a **possible hazard**
